

DEDAN KIMATHI UNIVERSITY OF TECHNOLOGY
CONTINUOUS ASSESSMENT TEST 1: EMT 3104: MECHATRONIC SYSTEM PROGRAMMING I
DATE: June 2025 **TIME: 1.5 HOURS**

- Define what is meant by the term embedded system with regards to Mechatronic systems and give 2 suitable examples of such systems in daily life. [2 marks]
- Using suitable well labelled diagrams, explain the 2 types of microcontroller interrupts and 3 ways that an interrupt can be triggered [4 marks]
- Using a suitable diagram explain the main source of digital input noise such as push buttons and hardware and software debouncing techniques. [6 marks]
- An ATmega32 series microcontroller contains several ports as general-purpose input and output (GPIO) ports. Discuss the 3 registers used to work with these ports and their functionality. [6 marks]
- In micro-controller programming, binary, decimal and hexadecimal number systems are generally used.
 - Convert the following binary number to hexadecimal and decimal: 10101101_2 [4 marks]
 - Compute the output of the C code below and the binary computations for each output [8 marks]

```
int main() {
    int a = 54, b = 23;
    int c = a & b;
    int d = a | b;
    int e = a ^ b;
    int f = (((c) | d) & e);
    printf("a = %d, b = %d, c = %d, d = %d, e = %d, f = %d", a, b, c, d, e, f);
    return(0);
}
```

14:5
 00010110
 $(2^7 \times 0) + 2^6 \times 1 + 2^5 \times 0 + 2^4 \times 1 + 2^3 \times 1 + 2^2 \times 0 + 2^1 \times 1 + 2^0 \times 1$
 $16 + 4 + 2 = 22$

14
 $116 \div 5 = 23 \text{ remainder } 1$
